CORE BACKEND SKILLS

Python & Django
Django REST Framework
PostgreSQL & ORM Optimisation
JWT & Session Authentication
REST API Design
Design Patterns (Observer, Factory, Strategy)
Git / GitHub / Postman
Render Deployment (Gunicorn, WhiteNoise)
VTPass API, Gmail SMTP, Monnify

STRENGTHS

Learning
Fast, self-directed — zero to production in months.

Problem Solving
Methodical debugger; fixes root causes.

Architecture
Backend-first mindset, clean & scalable code.

Delivery
Ships complete, working products independently.

EDUCATION

B.Sc. Information Technology
Sule Lamido University, Kafin Hausa
2024 – 2028

Huzaifa Sa'ad

BACKEND DEVELOPER — PYTHON & DJANGO

Self-taught backend developer with hands-on experience building and deploying real-world web applications using Python, Django, and Django REST Framework. Focused on scalable REST APIs, clean backend architecture, authentication systems, and production-ready deployment. Strong understanding of database design, API integration, and backend logic. Currently pursuing a B.Sc. in Information Technology at Sule Lamido University, Kafin Hausa.

WORK EXPERIENCE

Freelance Backend Developer — Self-employed

2024 – Present

Designed, built, and deployed a full production fintech application for a paying Nigerian client.

- Delivered a complete VTU (Virtual Top-Up) reseller platform for airtime and data resale, from requirements to live deployment.
- Integrated the VTPass API for MTN, Airtel, Glo, and 9mobile transactions with idempotent request handling.
- Built a secure wallet system with bcrypt-hashed transaction PIN, deposit/withdraw methods, cashback logic, and UUID-referenced transaction history.
- Implemented OTP email verification via Gmail SMTP, with automatic refunds on API failure codes (012, 014, 016).
- Built a session-based two-step purchase flow requiring zero JavaScript on the frontend.
- Integrated Monnify payment gateway for wallet funding (in progress).
- Added PWA support (manifest, service worker, HTTPS) for a mobile-first experience without an app store.
- Deployed on Render with PostgreSQL, Gunicorn, WhiteNoise, and python-decouple for environment management.

Tech: Python, Django, PostgreSQL, Bootstrap, VTPass API, Gmail SMTP, Render

PROJECTS

Student Resource Hub

Personal Project · 2025 – 2026

A production-ready REST API platform for Nigerian university students to upload, discover, and download study materials.

- Custom JWT authentication with role-based access control (Student, Lecturer, Admin).
- Nested category system with dynamic tagging and full-text search.
- Observer pattern for real-time notifications on ratings and comments via Django signals.
- Applied Factory, Repository, Strategy, and Decorator design patterns throughout the codebase.
- Recursive threaded comment system using self-referencing ForeignKey.
- File upload with ownership-based edit/delete permissions and download tracking.

Tech: Python, Django, Django REST Framework, PostgreSQL, JWT, Render

GitHub: github.com/Houzaad/student-resource-hub

Auction Marketplace API

Technical Assessment · 2026

A timed backend assessment (4–8 hrs) delivered in under 3 days: a full auction marketplace REST API with JWT auth, role-based permissions, and a four-rule bidding engine.

- JWT authentication with token blacklisting for secure logout; custom User model with email-based auth and role field (user/admin).
- Custom IsOwnerOrAdminOrReadOnly permission class enforcing object-level access control across listing and bid endpoints.
- Four enforced bidding rules: amount must exceed current price, owner cannot bid on own listing, expired auctions reject bids, current price updates atomically on each valid bid.
- Lazy auction-closing via `close_if_expired()` on the model, reused by both the request layer and a management command with no duplication.
- Auto-generated Swagger/OpenAPI documentation via drf-spectacular; winner assignment and full bid

history on auction completion.

Tech: Python, Django, Django REST Framework, JWT, drf-spectacular
